

## Security beyond Authentication - emAS IAM

emAS, eMudhra's authentication system that runs in over 47 large Asian and Global banks has set itself firmly in the PKI authentication space. Over the past few years, we have upgraded emAS from a pure PKI authentication engine to a multi-factor authentication engine supporting 15+ forms of authentication. Then, last year, we built adaptive authentication as an add-on feature that runs on a Spark platform.

Now, we're happy to introduce emAS - IAM (Identity and Access Management). emAS IAM is the top-of-the-line offering of emAS which allows users to build a trusted network across any number of devices, users and applications through a simple and intuitive dashboard.

- emAS IAM includes emAS Multifactor auth. engine and supports all 15+ factors of authentication.
- You can perform any action on emAS IAM Dashboard in 3 simple steps.
- emAS IAM supports sophisticated user provisioning/de-provisioning, integration with SIEM, advanced reporting and much more.
