

emAS SSO - Enable a Single Sign on in your Organization

Add an extra layer of security to your organization

Single Sign On Authentication (a part of emAS IAM Suite) can provide your users with a seamless authentication experience while they navigate through your applications.

So how does this work? Once users log into any one of your applications, they won't have to enter their credentials again when entering another one, as they will be automatically logged in all of them, regardless of the platform, technology, or domain!

emAS IAM can not only help with simple SSO but also manage complex scenarios where authentication layers may differ across applications for each user.

With 3-step flow process, it is extremely user friendly with a quicker than average deployment time.

- It's easy to implement Single Sign On in your custom applications
- You can now integrate Single Sign On with your enterprise cloud applications in just a few clicks!
- Single Log Out - once you log out of one of the configured applications, your session will end in all of them.
- emAS SSO empowers you to control and customize any stage of the authentication and authorization pipeline. We know that every case is completely different!
- emAS SSO conforms with all the global standards around Single Sign On, Multi Factor Authentication & PKI like SAML, OATH, PKCS etc.

For more information on how emAS IAM can help your organization provide your clients with a holistic authentication experience, get in touch with your account manager or reach out to us at [**eservices@emudhra.com**](mailto:eservices@emudhra.com).
