

e-Prescriptions and e-Records, using emSigner

It is estimated that medication errors originating from incorrect or irrational use of prescriptions alone account for more than 7000 deaths in the US. As per experts, these numbers are even higher in countries such as India and China, where even a larger population is known to practice irrational use of prescriptions.

e-Prescriptions and e-Records generated using emSigner, eMudhra's flagship paperless solution, has the potential to completely eliminate this costly mistake. Apart from saving precious lives by bringing down the medication errors by more than 60%, e-Prescriptions and e-Records generated using emSigner can help health-care organizations save anywhere between \$100,000 to over \$1 million each year.

Here are some highlights of our unique paperless solution:

- emSigner digitizes all prescriptions and records to bring in legal admissibility to physicians and other staff's actions across all workflows
- emSigner supports legally valid digital (or electronic) signatures compliant with most global healthcare laws
- emSigner communications are encrypted to the highest standards with a tamper-proof document-level audit trail, and system-level audit trail
